Altimeter 6000 m, divided in 6 x 1000 m, with barometer, black metal case Ø 65 mm, white dial Ø 60 mm, weight 150 gr. with leather case and thong.

## Altimeter / Compass / Weather-station digit. n°44

No. 44 is an altimeter with integrated compass and with a full weather-station, air pressure reading, bar chart for pressure changes and weather forecast with symbols. In addition the instruments shows an altitude profile and allows to store the maximum/minimum heights as well as total ascending. The device incorporates a clock with stop watch function. Case plastic, 60x75 mm, Display 35 mm, weight 45 g.

## Altimeter / Windmeter / Handheld weather-station n°525

The highly precise weather station with multiple functions uses Swiss sensors for measuring the surrounding weather data. The MeteoGuide PRO is the perfect companion for outdoor activities like sailing, surfing, kiting, hang- gliding, hiking or even mountaineering. The device always gives reliable information about weather tendency, temperature, humidity or wind speed in km/h, knots and beaufort. The sapphire bedded propeller already responses at 3 km/h wind speed, also windchill can be displayed. If you are a mountaineer it is especially important to know how the weather will develop. In addition to the weather symbols displayed, the MeteoGuide Pro gives information about the dew point- this is a relevant parameter regarding fog. The menu of the MeteoGuide PRO is easy to handle, in seconds all desired information will be displayed; like setting the sailing timer or getting waked up by the alarm function.
